

ILO Nepal Annual Report 2025

2025 in Numbers

This report analyzes the key programme statistics presented on page 3 of the ILO Country Office for Nepal's Annual Report 2025, titled "2025 in Numbers." The infographic summarizes headline results across six programme areas: Social Security Fund enrolment, Employment Service Centres, Enterprise Labour Audits, Migrant Worker outreach, Child Labour elimination, and Entrepreneurship Training, along with the 2025 minimum wage increase.

The goal of this analysis is to visualize the scale of these results, examine gender participation patterns where reported, and highlight areas where implementation appears strongest or still partial.

1. Summary of Key Figures

The table below summarizes the figures reported across all six programme categories on the infographic.

Table 1: Summary of Key Figures

Category	Key Figures
Enterprise Labour Audits	879 audits processed
Social Security Fund	2.26 million workers enrolled (up from 0.6 million in 2023); 5,245 informal workers newly enrolled
Migrant Workers	1,400+ workers reached with awareness services
Employment Service Centres	677,738 jobseekers registered; 59,062 job placements facilitated
Child Labour	14 municipalities declared CLFZ; 204 local governments engaged
Entrepreneurship Training	1,000+ entrepreneurs trained; 55.5% started or strengthened a business

2. Employment Service Centre Outcomes

Employment Service Centres registered 677,738 jobseekers between 2023 and 2025 but facilitated only 59,062 job placements. This represents a conversion rate of approximately 8.7 percent from registration to placement.

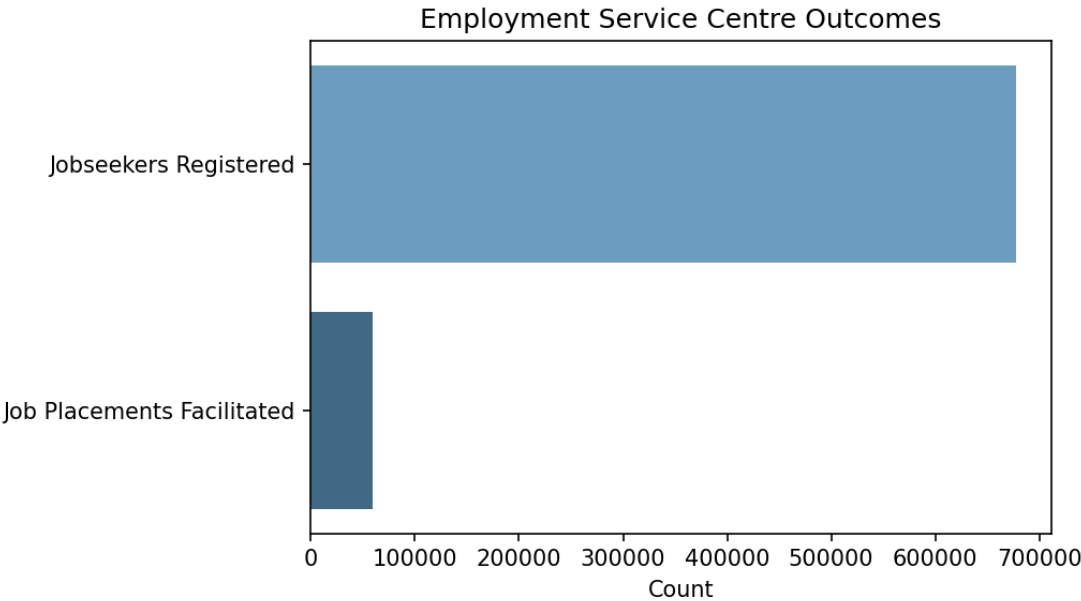

Figure 1: Employment Service Centre outcomes, jobseekers registered vs. job placements facilitated

Insight: The large gap between registration and placement is typical of labour market matching systems, but it highlights an opportunity area, only a small share of registered jobseekers was ultimately placed into jobs.

3. Women's Share of Participation

Two figures on the infographic report a gender breakdown: jobseekers registered at Employment Service Centres and entrepreneurs trained under the Start and Improve Your Business programme.

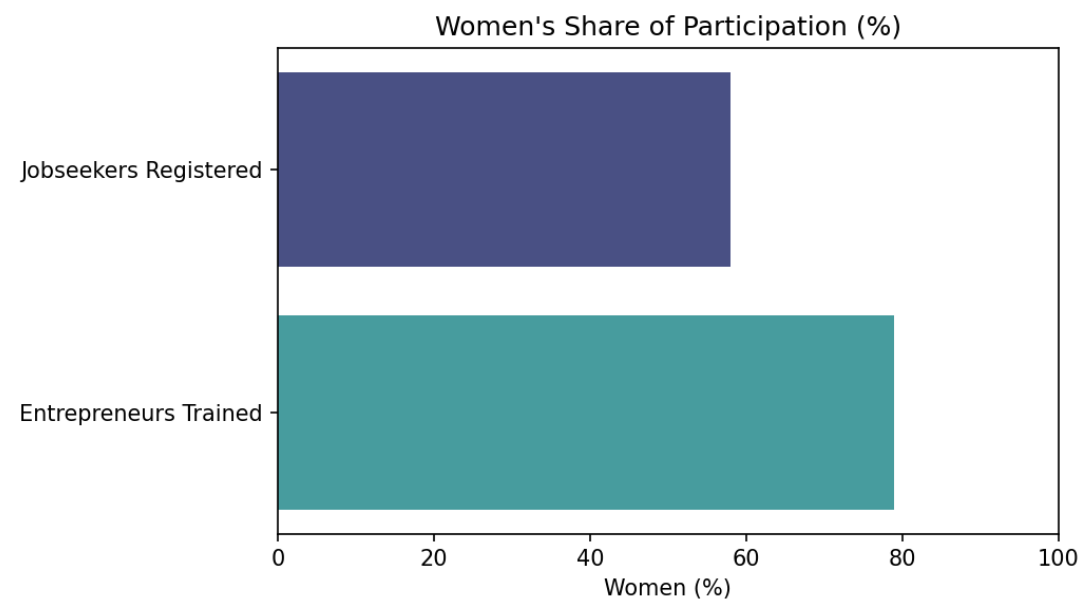

Figure 2: Women's share of participation in Employment Service Centre registration and entrepreneurship training

Insight: Women make up 58 percent of jobseekers registered at Employment Service Centres and 79 percent of entrepreneurs trained, showing strong female participation in both programmes, particularly in entrepreneurship training.

4. Child Labour Free Zone: Engagement vs Declaration

Of Nepal's 753 local governments, 204 are engaged in Child Labour Free Zone initiatives, while only 14 have completed the process and formally declared themselves a Child Labour Free Zone.

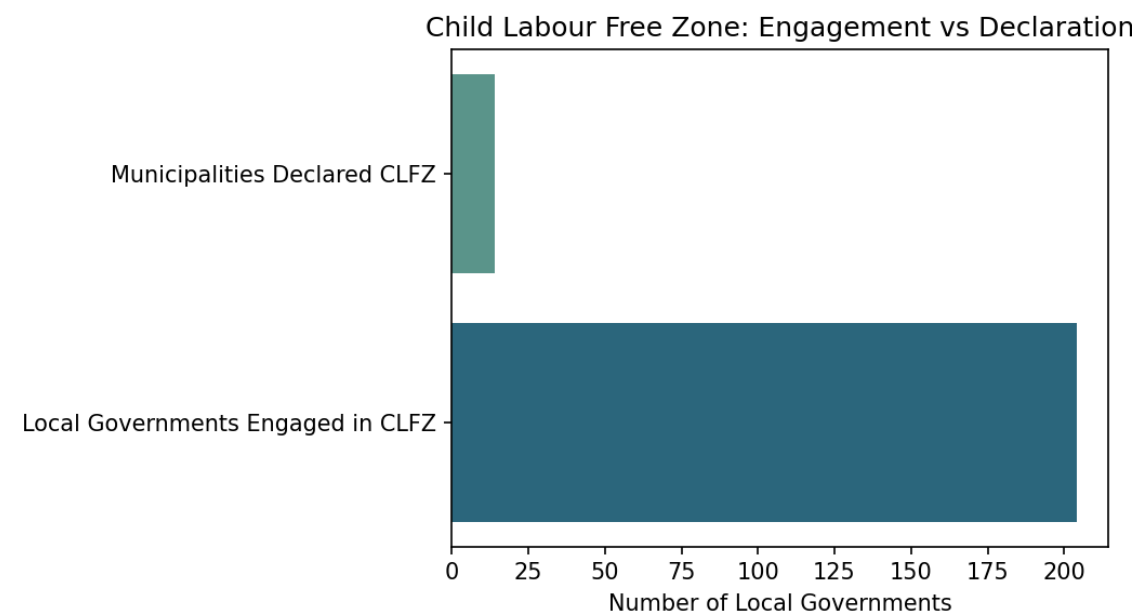

Figure 3: Local governments engaged in Child Labour Free Zone initiatives vs. municipalities that have formally declared CLFZ status

Insight: There is a steep drop-off between initial engagement and full declaration, only about 7 percent of engaged local governments have completed the declaration process, suggesting that declaration requires sustained effort beyond initial sign-up.

5. All Reported Metrics by Category

Because the 12 metrics on the infographic vary enormously in scale, from 13 (the percentage minimum wage increase) to 677,738 (jobseekers registered), a log scale is used to compare all reported values across categories on a single chart.

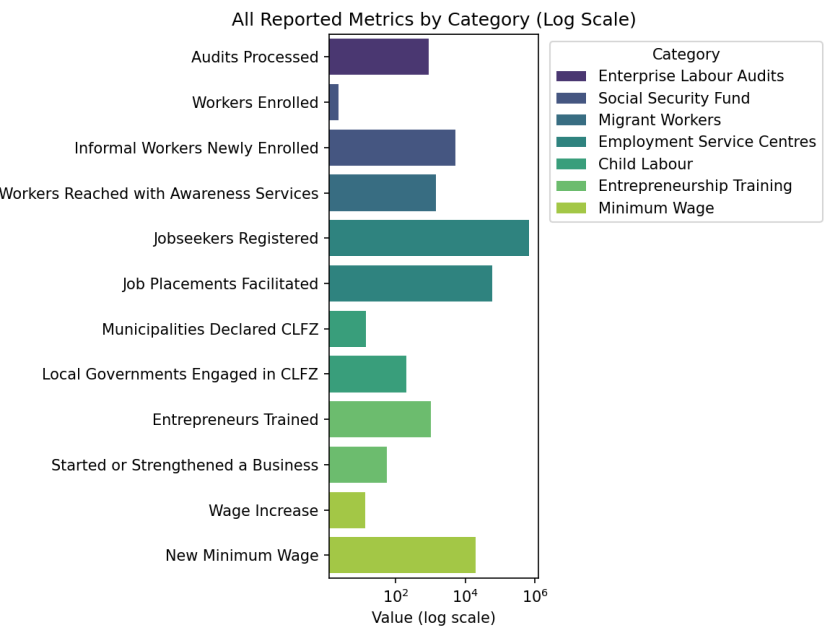

Figure 4: All reported metrics across the six programme categories, shown on a logarithmic scale

Insight: Employment Service Centre metrics dominate in absolute scale, while Enterprise Labour Audits and Minimum Wage figures represent narrower programme reach or single policy decisions rather than large-scale enrolment drives.

6. Key Takeaways

- Social Security Fund enrolment nearly quadrupled between 2023 and 2025, from 0.6 million to 2.26 million workers.
- Employment Service Centre job placement conversion is low relative to registration, at approximately 8.7 percent.
- Where gender data is reported, women's participation is strong, 58 percent in Employment Service Centre registration and 79 percent in entrepreneurship training.
- Child Labour Free Zone declarations lag far behind engagement, only 14 of 204 engaged local governments have completed formal declaration.
- The minimum wage increased 13 percent to NPR 19,550 per month, applying uniformly across all sectors.
- Not all metrics on the infographic include a gender breakdown; only Employment Service Centre registration and entrepreneurship training report this detail.
