

Business Model Canvas for GardenSewa: A Practical Business Analysis

1. Introduction

What is a Business Model Canvas?

A Business Model Canvas, or BMC, is a one-page tool that shows how a business creates, delivers, and captures value. Developed by Alexander Osterwalder and Yves Pigneur, it breaks a business into nine connected blocks viewed briefly, instead of a long-written plan.

Why it is Important for Businesses

The canvas turns a complex business idea into something simple enough to discuss in one meeting. It helps a team see how customers, operations, and finances connect, and spot gaps before time and money are spent.

Brief Introduction to GardenSewa

GardenSewa is a professional gardening services platform based in Kathmandu, Nepal. It connects homeowners, hotels, resorts, and offices with skilled gardeners for lawn care, planting, landscape design, irrigation, and year-round garden maintenance, while also selling plants, trees, and soil products and offering a partnership programme for home growers who want to sell their own plants.

2. Business Model Canvas Framework

Before applying the canvas to GardenSewa, here is what each of the nine building blocks means in general terms.

Table 1: Business Model Canvas Framework

Customer Segments	The specific groups of people the business aims to serve.
Value Propositions	The value and problem-solving the business delivers to customers.
Channels	The ways the business connects and delivers value to customers.
Customer Relationships	The approach used to attract, support, and retain customers.

Revenue Streams	The ways the business generates income.
Key Resources	The essential assets required to run the business.
Key Activities	The core tasks carried out to deliver the value proposition.
Key Partnerships	The external parties that support the business's operations.
Cost Structure	The main expenses involved in running the business.

3. Business Model Canvas for GardenSewa

This section applies each of the nine blocks specifically to GardenSewa, based on how the platform operates.

Customer Segments

GardenSewa serves urban homeowners who want their garden and balconies looked after, along with hotels, resorts, and restaurants such as Aloft Kathmandu and Club Himalaya that need their grounds kept in top condition for guests. Offices and corporate clients form another segment, together with Airbnb hosts and rental property owners. Individual home growers who want to sell their plants through the partnership programme are also an important segment.

Value Propositions

GardenSewa's main value lies in experience, range, and reliability. The team brings proven expertise and a strong track record of completed garden transformations to every project. Customers get everything from one-time cleanups to full landscape design and yearly maintenance contracts on a single platform, along with access to quality plants, trees, and soil products, so they do not need to look elsewhere for their gardening needs.

Channels

Customers reach GardenSewa mainly through its website booking page, or by calling the helpline number directly. Facebook and social media build awareness, and blog articles add further reach. The partnership programme brings in home growers, while the career page attracts new gardeners to join the team.

Customer Relationships

GardenSewa keeps in touch through direct phone and helpline support and offers personalized consultation to understand each customer's design and maintenance needs. Regular clients such as hotels

and resorts are supported through ongoing, often yearly maintenance agreements. Testimonials from clients like Gokarna Forest Resort and Kathmandu Guest House build trust, and an FAQ page supports customers who prefer to find answers on their own.

Revenue Streams

GardenSewa earns through fees for one-time services such as cleanups, planting and transplanting, as well as recurring and yearly garden maintenance contracts. Larger projects such as landscape design, hardscaping, and lighting installation add higher value transactions. Sales of trees, plants, soil, and fertilizers bring in further income, along with commission earned from plants sold through the partnership programme.

Key Resources

The most important resource is GardenSewa's skilled and verified team of gardeners, supported by a stock of plants, trees, and gardening materials. Tools and equipment for irrigation, hardscaping, and lighting work are equally essential. The GardenSewa brand and its growing network of hotel, resort, and corporate clients round out its resources.

Key Activities

Daily activities include lawn care, planting and transplanting, and general garden maintenance such as weeding, pruning, and seasonal cleanups. The team also designs and installs landscaping features, sets up and repairs irrigation systems, and manages pest and disease control. Recruiting and training gardeners, along with marketing and blog content, are ongoing tasks that support growth.

Key Partnerships

GardenSewa depends on independent home growers and plant suppliers who join through its partnership programme, along with local nurseries and equipment suppliers. Its hotel, resort, and restaurant clients, including Aloft Kathmandu, Club Himalaya, and Bajeko Sekuwa, are valued long term partners. International landscape and horticulture partners such as Home Garden Restoration, Home Park Gardens, and Pristine Gardens support knowledge sharing and best practice.

Cost Structure

GardenSewa's main costs come from gardener wages, training, and field logistics. Procuring plants, trees, soil, and fertilizers forms another significant cost area, along with tools, irrigation systems, and

hardscaping materials. Website maintenance, marketing, and payments to partner plant suppliers add further ongoing costs.

GardenSewa Business Model Canvas

Table 2: Business Model Canvas for GardenSewa

Key Partnerships	Key Activities	Value Propositions	Customer Relationships	Customer Segments
- Home growers and plant suppliers via the partnership programme - Hotel, resort, and restaurant clients such as Aloft and Club Himalaya - Horticulture partners like Home Garden Restoration and Pristine Gardens - Local nurseries and equipment suppliers	- Lawn care, planting and transplanting - Garden maintenance, pruning, and seasonal cleanups - Landscape design and hardscaping installation - Irrigation, pest, and disease control - Recruiting gardeners and content marketing	- Trusted, verified gardeners with proven expertise - Full range of services from cleanups to yearly maintenance - Expert landscape design tailored to each space - Quality plants, trees, and soil products in one place - Strong track record of completed garden transformations	- Direct support via helpline and phone bookings - Personalised consultation for design needs - Long term maintenance agreements - Testimonials that build client trust - FAQ page for self-service queries	- Urban homeowners with gardens or balconies - Hotels, resorts, and restaurants - Offices and corporate clients - Airbnb hosts and rental owners - Home growers selling via the partnership programme

- Skilled and verified gardening workforce - Plant nursery and tree stock - Irrigation and hardscaping equipment - Established brand reputation - Network of hotel and resort clients			- Website and online booking page - Helpline number and phone bookings - Facebook and other social media - Blog articles and content marketing - Partnership programme and career page	
Cost Structure		Revenue Streams		
- Gardener wages, training, and logistics - Plant, tree, soil, and fertilizer procurement - Equipment and hardscaping materials - Website maintenance and marketing - Payments to partner plant suppliers		- Fees for one-time services such as cleanups and planting - Recurring and yearly maintenance contracts - Landscape design and hardscaping projects - Tree and plant sales, soil and fertilizer products - Commission from partnership programme		

4. Benefits of the Business Model Canvas for GardenSewa

Using the canvas gives GardenSewa a clearer picture of how its business functions connect. Mapping customer segments against value propositions confirms that its range of services, from residential gardens to larger hotel grounds, genuinely matches the needs of each type of client rather than being offered without a clear reason.

Placing key resources, activities, and partnerships side by side shows how dependent GardenSewa is on its gardening workforce and its network of hotel, resort, and home grower partners, making it easier to decide where to invest next, such as expanding the plant nursery or adding trained gardeners in new cities.

Seeing revenue streams and cost structure together helps GardenSewa spot which services or client segments are more profitable and gives a quick way to test whether a new service idea fits its existing customers, channels, and partnerships before committing resources to it.

5. Conclusion

The Business Model Canvas gives GardenSewa a single page view of a business that would otherwise be hard to summarise, given how many services, client types, and partners are involved. It shows how GardenSewa's experienced gardening team, wide service range, and partnership programme work together to serve Nepal's growing demand for professional, reliable garden care. Revisiting the canvas regularly will help GardenSewa test its assumptions and keep its business model aligned with what customers and partners need.
