

HR Recruitment and Performance Analysis

Recruitment, Salary, Performance and Training Overview

This report is based on data collected for 200 employees. It includes department, job title, gender, experience, monthly salary, performance score, attendance, annual bonus, employment status and training hours for each person. The main goal of this report is to understand how these different aspects relate to each other, such as whether more experience leads to higher pay, and whether performance and attendance connect to pay or training at all.

1. Workforce Overview

The company has employees spread across 10 departments, with an even 20 employees in each one. Executives and Senior Executives make up the largest job title groups, followed by Team Leads, Managers and Assistant Managers, with fewer Senior Managers and Interns. The gender split is even, with 100 male and 100 female employees.

Figure 1: Number of employees in each department

Insight: Every department has exactly 20 employees, so the workforce is evenly spread across all 10 departments with no single department standing out in size.

Figure 2: Number of employees by job title

Insight: Executives and Senior Executives form the biggest job title groups, while Senior Managers and Interns are the smallest, showing a workforce that leans more toward mid-level roles than senior or entry-level ones.

Figure 3: Gender split

Insight: The gender split is exactly equal, with 100 male and 100 female employees, showing no imbalance at all.

2. Employment Status and Experience

Most employees are currently Active, with smaller numbers Resigned, On Leave or on Probation. Experience ranges from fresh joiners with no experience to employees with as many as 29 years, though most employees fall under 10 years.

Figure 4: Employment status distribution

Insight: Most employees are Active, while Resigned, On Leave and Probation together make up a smaller share, so the workforce is mostly stable now.

Figure 5: Experience years distribution

Insight: Most employees have under 10 years of experience, with a smaller number of long-serving employees stretching the range up to 29 years.

3. Salary and Bonus

Monthly salary ranges from around 800 to 12,000 US dollars. Salary rises closely with experience, and annual bonus rises closely with salary. These two move together very strongly, which suggests that higher pay in this dataset comes mainly from being more experienced, rather than from anything else measured here.

Figure 6: Monthly salary distribution

Insight: Salary is spread across a wide range, from under 1,000 to 12,000 US dollars a month, with no single salary band standing out sharply.

Figure 7: Experience vs monthly salary

Insight: Salary increases steadily as experience increases, showing a strong and consistent link between the two, regardless of employment status.

Figure 8: Monthly salary vs annual bonus

Insight: Annual bonus rises closely in line with monthly salary, meaning employees who are paid more each month also tend to receive a much larger bonus.

4. Performance, Attendance and Training

Each employee also has a performance score, an attendance percentage, and a training hours count. Training hours go down as experience goes up, meaning newer employees receive more training while experienced employees receive less.

Figure 9: Experience vs training hours

Insight: Training hours are highest for employees with little experience and drop off steadily as experience increases, showing training is focused on newer staff.

Figure 10: Correlation between numeric columns

Insight: Salary and bonus are strongly tied to experience, while performance score and attendance percentage show almost no relationship with salary, bonus or experience, meaning pay in this dataset is driven mainly by experience rather than performance.

5. Key Takeaways

- The dataset is clean, with no missing values, duplicates, or placeholder values found anywhere.
- Employees are spread evenly across 10 departments, and gender is exactly balanced at 100 male and 100 female.
- Executives and Senior Executives are the largest job title groups.
- Monthly salary and annual bonus are both strongly tied to experience, more experience means more pay.
- Performance score and attendance percentage do not meaningfully relate to salary, bonus or experience.
- Training hours are highest for newer employees and drop off as experience grows, suggesting training is aimed at onboarding rather than ongoing development.
